Dr. Foroud Hakim is an internationally recognized speaker with an unwavering passion for all aspects of contemporary restorative dentistry. He is particularly motivated to help colleagues in improving treatment outcomes, patient experiences, as well as practice efficiency. Dr. Hakim has balanced private practice and dental education for 31 years in the San Francisco Bay Area. He splits his time between “real world/wet fingered” private practice, and teaching dental students at University of the Pacific, as well as colleagues across the country. His areas of focus range from predictable and lasting adhesion, minimally invasive single tooth dentistry, all the way through to full mouth esthetic rehabilitation and smile design.

Dr. Hakim is the founder of San Ramon Dental Excellence, Director of Occlusion at the University of the Pacific.

Presentation: *Contemporary Esthetic Dentistry - Redefining the Cliche*

Once upon a time, esthetic or cosmetic dentistry conjured up images of smile rehabilitations using ceramic veneers. Today, it's so much more. We should anticipate esthetic dentistry as a baseline expectation of all of our patients. Not only should our procedures improve health and function, but they should do so while simultaneously improving the appearance of a single tooth, multiple teeth, or our patient's broader smile and holistic facial appearance. Add to this the growing emphasis on tooth structure preservation, the minimally invasive approach, and the expanded menu of materials and techniques, and it is easy to see why staying current is more critical than ever before. This course covers the subject broadly by reviewing esthetic concepts related to both direct and indirect restorations as well as multidisciplinary case planning and lab communications.

Learning objectives will include many of those listed in all 10 short course descriptions above, namely:

- How Strong is Strong Enough? Adhesion Demystified
- The Class II Solution
- The Class IV Solution
- The Class V Solution
- Should I Hold Firm or Go With the Flow? A Viscosity-Based Rubric for Composite Selection
- Modern Ceramics Roadmap
- Cementation Deconstructed
- You Never Get a Second Chance to Make a First Impression
- Don't Go Postal Over Post & Core
- My Technician & I Don't Speak the Same Language
